Exterior Pre-Install Information

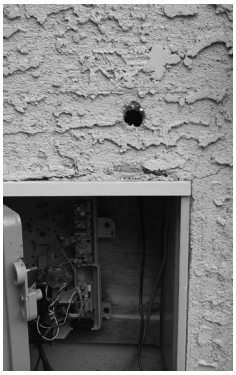

1) This is typically what the side of a house looks like. The tan rectangular panel houses all the communication lines.

2) Opening that panel and you can see a fiber drop already pulled inside.

3) Fiber drop uncoiled out of the communication panel.

4) Small hole that connects our services to the inside wiring of the house.

5) Fiber, coax, and power cables fed through the hole.

6) Silicone added to the hole

7) Bushing inserted in the hole.

8) Pilot holes for the outside enclosure
